SKILLS

Frontend

- React
- Next.js
- TypeScript
- Vite
- Tailwind CSS
- Framer Motion
- GSAP
- Three.js / R3F

Backend

- Node.js
- Express
- Socket.IO
- Python
- FastAPI
- REST APIs

Tooling & deploy

- Git / GitHub
- Vercel
- Docker

Design

- UI/UX
- RTL & bilingual
- Responsive
- Design systems

AI

- Claude Code (AI coding agent)
- Claude API
- Prompt engineering
- AI content & scripting
- Text-to-speech

LANGUAGES

Persian (Dari) Native

WEB & AI PRODUCT DEVELOPER

From idea to a live product — fast, clean and ready to use.

I build complete web products: sales landing pages and polished interfaces, admin dashboards and real-time servers. I work with AI coding agents and AI tools, which lets me turn an idea into a working, clickable prototype within hours. I specialise in bilingual (Persian RTL / English LTR) interfaces and smooth mobile-first experiences.

10+

live, deployed projects

20+

repositories on GitHub

24–48h

to a first working demo

What I deliver

• Landing pages & funnels

Lead-capture pages with qualification forms and a clear path to contact.

• Admin panels & dashboards

Manage users, leads and content, with live charts and reports.

• Real-time web apps

Messaging, community and interactive systems on Node.js and Socket.IO.

• AI content & automation

Scripts, sales copy, answer bots and smart internal tools.

Experience

Independent Web & AI Product Developer

Freelance · Remote · Present

- ✓ Designed and built two product concepts for Hills Project, a content-creation school with ~2,800 members: a real-time community messenger and a member networking platform. Their development team praised the design.
- ✓ Built a matching platform with a transparent scoring algorithm, natural-language Persian search and a full admin panel (analytics, member management, custom profile fields, CSV export).
- ✓ Designed and shipped 10+ responsive, animation-rich websites and landing pages for restaurants, e-commerce and AI products.
- ✓ Built an AI narration tool in Python with the Claude API that turns rough notes into a finished YouTube voice-over.

Selected projects

Hills Messenger

A Telegram-style branded community messenger: channels, groups, reactions, polls, voice notes and an AI assistant bot.

[React](#) · [TypeScript](#) · [Node.js](#) · [Socket.IO](#)

🔗 hilles-project.vercel.app

Hills Connect

Member networking & matching: swipe-to-match, collaboration opportunities and a complete admin panel.

[React](#) · [TypeScript](#) · [Zustand](#) · [Framer Motion](#)

🔗 hills-connect.vercel.app

AI YouTube Narrator

Turns rough Persian or English notes into polished English narration, with a ready-made voice track.

[Python](#) · [Claude API](#) · [Neural TTS](#)

Why me?

You see real work before you sign — not promises, but a clickable demo built with your own brand.

How I work

1

Discovery

I learn your goal, audience and exact needs.

2

Rapid demo

A real, clickable prototype within 24–48 hours.

3

Full build

Final design, backend and admin panel, with progress updates.

4

Launch & support

Deployment on your domain and hosting, plus post-launch fixes.

See your idea live in 48 hours

Send a short brief. You get a working demo first — then you decide.
